## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-14, drawn to an integrated circuit structure, classified in class 257, subclass 369.
  - II. Claims 15-25, drawn to a method of simultaneously forming different types of transistors on a substrate, classified in class 438, subclass 199.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the processes of claims 15 and 21 form and subsequently remove second spacers from the first transistor type. The products of claims 1 and 8 may include this second spacer. The products of claims 1 and 8 also may not necessarily include impurity regions as claimed in processes 15 and 21.

Therefore the process as claimed in claims 15 and 21 can be used to make other and materially different products.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
